

WIN10 UPGRADE

Expertise integrated to your business processes

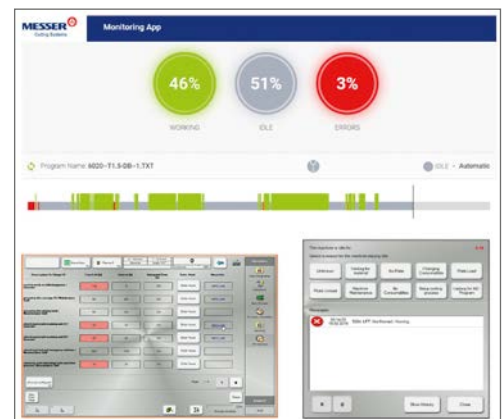

A **strategic upgrade package** for legacy Messer machines to realize the benefits from latest hardware, software, HMI enhancements, and operating system enhancements.

The possibility of integrated machine monitoring and evaluation of the machine operating data represents an important step towards comprehensive process transparency.

Insight into the machine utilization, downtime and reasons, and accumulated errors are presented in an intuitive graphical interface.

FEATURES AND BENEFITS AND OPTIONS:

- Updated Global Control hardware featuring WIN10 IoT Enterprise 32-Bit operating system
- “PM Monitor” to track and advise recommended PM tasks and PM intervals (optional)
- Integrated Backup Tool to minimize recovery time related to HDD failure
- “Idle Time Capture” configured to help categorize lost capacity related to idle time (optional)
- Wireless hardware for connection to customer supplied network
- OmniFab “Machine Insight” provides transparency via real-time machine monitoring (optional)
- UPS Battery backup

Machine Insight: Monitoring and idle time capture (optional)
